Your next idea. A clear way forward.

A practical guide to starting a website, app or AI project with EmberWeb.

INSIDE THIS GUIDE

02 How a project moves from conversation to launch

03 What to prepare and how to get in touch

emberweb.co.za

THE PROJECT JOURNEY

Know what happens next.

Start with the job you need done. We help turn it into a focused first build, with scope, timing and price agreed before work begins.

01

Tell us the goal

Send a short brief about your business or idea, the people who will use it and the problem you want to solve. You do not need a technical specification.

02

Agree the first build

We discuss the workflow, priorities and constraints, then confirm the proposed scope, timing, price and any third-party costs in writing.

03

Review and approve

Once the proposal is accepted, the agreed build starts. You review the work against the agreed scope and give feedback at the planned checkpoints.

04

Launch and hand over

We check the agreed flows and prepare the launch. Domain ownership, access, handover and any ongoing EmberCare support are agreed in writing.

A clear agreement first

A private invoice follows an accepted proposal if payment is due. There is no public checkout or automatic project commitment.

A USEFUL STARTING POINT

Bring the problem. We will work on the plan.

A few real examples help us understand your business faster. Share what you have; we can identify the gaps together.

The outcome

What should become easier, faster or clearer? Who will use the website or tool?

The current way of working

Describe the steps, tools and handovers involved. An anonymised example is enough.

Your starting materials

Bring existing branding, approved copy, a website link or screen references if you have them.

Budget, timing and priorities

Tell us your target date, budget range and what the first version must do.

Choose your next step
